

Earth magnetic field in cells division and evolution – theory of tumour emersion

Nikola Trifunović, Dragan Jevdić, Aleksandar Jevdić, Katarina Jevdić

Abstract

This original work explains that magnetic and electro-magnetic forces in cells are resulting vector quantities of the Earth macro-magnetic fields and micro-magnetic-electromagnetic fields from cells.

It has, also, been pointed to a deficiency in biological science, which does not study the contribution of Earth magnetic field (EMF) in the evolution of living world on this planet.

EMF enables division of mother cell into two daughter cells, i.e. the promoter of the cell's division is the natural EMF. That the above statement is true was proven by Russian experiments which showed that fetus perished in zero EMF.

The origin of Crossing-over has been explained, i.e. the EMF enables the exchange of genes on the homologous chromosome segments in north-south and east-west directions.

A rampaged cell, dividing itself endlessly, is a malignant cell and it destroys an organ and then the entire organism. This malignant cell appears only in unnatural EMF, (anomalous increase), as a product of artificial magnetics in the people's dwelling spaces.

It has been explained why Crossing-over occurs with tumours. It has, also, been explained how and why tumour cell is an everliving cell.

On the basis of the tumour appearance theoretical explanation, we think that the cancer genesis has been solved.

Key Words: EMF, cells division, Crossing over, evolution, theory of tumour.

Zemljino magnetno polje u deobi ćelije i evoluciji anomalijsko magnetno polje – uzročnik malignih oboljenja

Sažetak

Ovaj originalni rad objašnjava da su magnetne i elektromagnetne sile u ćelijama rezultujuće vektorske veličine makrozemljinih magnetnih sila i mikro magnetnih - elektromagnetnih sila iz ćelija.

Ukazano je na nedostatak biološke nauke koja neproučava doprinos Zemljinog magnetnog polja (ZMP) evoluciji živog sveta na Zemlji.

ZMP omogućava podjelu majke ćelije na dve kćeri ćelije, tj. promotor podjela ćelija je prirodno ZMP. Da je ovo tačno potvrdili su i Ruski eksperimentalni radovi, naime dokazavši da fetus ugine u nultom ZMP.

Objašnjen je nastanak Crossing overa, dokazom da je ZMP omogućilo razmenu gena na homologim segmentima hromosoma i to u pravci sever-jug i istok-zapad.

Podivljala ćelija koja se neograničeno puta deli je maligna ćelija koja uništava organ a zatim i organizam. Maligna ćelija nastaje isključivo u neprirodnim ZMP (anomalijskim priraštajem-AP, Anomalijska zona-Az), koji su proizvod veštačkih magnetika u boravišnim prostorijama ljudi. Objasnjeno je zašto je Crossing over zastupljen kod tumora. Takođe je dato objašnjenje kako i zašto je ćelija tumora većito živeća ćelija.

Na osnovu teoretskog objašnjenja (kao i praktičnih merenja magnetnih i elektromagnetnih polja) nastanka tumora, smatramo da je geneza raka rešena.

Ključne reči: ZMP, podela ćelije, Crossing over, evolucija, teorija o tumoru.
