

CONTRIBUTION TO KNOWLEDGE OF ENORMOUS EARTH MAGNETIC FIELDS
INTENSITIES AND THEIR VARIATIONS (EMF and V) IN ETIOPATHOGENESIS OF
MALIGNANT DISEASES (MD)

ABSTRACT

This paper's aim is contribution to etiopathogenesis of MD appeared under the influence of enormous EMF and V intensities. It has been studied how EM and V of changed natural values act pathogenetically and cause disease. Synthesis of two data groups have been made. Processing the first data group correlation between present enormous EMF and V zones and the body's regions covered by MD has been found. The second data group are theoretical explanations of unclear things found in literature concerning MD from knowing the EMF and V point. Coincidence between practical measuring results and theoretical explanations of many unclear things has been found. The diseased was moved away from the enormous EMF and V influence.

It was concluded that EMF and V are dominant cause of MD appearance and that enormous EMF and V elimination from dwelling places is a great help for patient and his doctor in treatment.
